PROFILE

Programmer and technical operator for websites, WordPress, internal tools, mobile MVP first passes, automation, n8n/Make, scripts, data workflows, browser/API debugging, AI workflow wiring, frontend/dashboard fixes and workflow reliability.

I work best from sample data, staging URLs, screenshots, logs, exported workflows, repositories or clear reproduction steps. For scoped work, I aim to deliver a useful first pass in 24-48 hours: working artifact, acceptance check, review notes and concise handoff.

The strongest fit is a concrete buyer problem that can be inspected: a broken lead path, a workflow that fails, data that does not reconcile, a mobile MVP that needs architecture/QA discipline, a no-code app that needs launch QA, an API/webhook path, or an AI workflow that needs dry-runs, logs and guardrails.

PROOF PICKER

Fastest route for profile fields and buyer follow-up: [Curated Examples / Proof Picker](#).

- **Website revenue-leak audit:** [public proof route](#)
- **n8n / Make / Zapier reliability rescue:** [public proof route](#)
- **Sheets / CRM reporting repair:** [public proof route](#)
- **React Native / Expo MVP proof-of-process:** [public proof route](#)

BUYER OUTCOMES

- **Web / WordPress:** focused rescue pass with browser evidence, responsive checks and a clear launch or fix handoff.
- **Automation:** safer n8n/Make/Zapier/webhook flows with dry-runs, logs, replay notes and explicit operational limits.
- **Data / dashboards:** cleaner files, rejected rows, before/after counts, KPI sanity checks and acceptance criteria a buyer can verify.
- **Mobile MVPs:** React Native / Expo first-sprint architecture with role flows, API/state boundaries, offline-safe drafts and iOS/Android validation.
- **AI / no-code:** Base44/Lovable/Supabase/OpenAI/Anthropic first passes with approved inputs, fallback paths and human review points.

CORE SERVICES

- Python and JavaScript scripts for CSV/JSON cleanup, APIs, reports, file processing and repetitive operations.
- Google Sheets and Apps Script automation, imports, dedupe flows, status logs and handoff notes.
- Web, WordPress, frontend and dashboard debugging across HTML, CSS, JavaScript, responsive layout, tables, filters and chart states.

- Internal tools and MVP first passes for small admin flows, dashboards, intake utilities and reviewable operational systems.
- React Native / Expo MVP architecture and first-sprint scaffolding for marketplace/service apps with consumer, provider and support/admin roles.
- QA smoke checks, browser workflow checks, Playwright-style evidence capture and concise technical reports.
- API health checks, endpoint debugging, JSON plans, timing/status assertions and Markdown/CSV/JSON reports.
- Workflow reliability checks for n8n, Make, Zapier, webhooks, CRM imports and AI/no-code prototype handoffs.
- AI workflow wiring with approved inputs, prompts/model calls, fallbacks, logs, dry-runs and human review points.
- Ecommerce mismatch checks for prices, products, paid orders and dashboard totals that do not match across a store, sheet, app or internal panel.
- Website lead recovery triage for small businesses: mobile CTA, forms, booking paths, menus, multilingual pages and conversion-path bugs.
- Agent Ops and AI coding workflow audits: instructions, runbooks, check gates, context conflicts and reproducible handoff formats.

TECHNICAL STACK

Languages and scripting: Python, JavaScript, TypeScript, Google Apps Script, HTML, CSS, JSON, CSV, Markdown

Automation and QA: Playwright-style browser checks, API health checks, smoke reports, fixture-based checks, console/network evidence

Workflow tools: Google Sheets, Apps Script, Zapier, Make, n8n-style webhooks, CRM import/export workflows, Anthropic/OpenAI API wiring

Web, mobile, tools and dashboards: frontend debugging, responsive fixes, WordPress fixes, React Native / Expo, Expo Router, Tamagui, TanStack Query, Zustand/MMKV, embeddable calculators/widgets, internal tools, Base44/no-code QA, MVP first passes, dashboard QA, WordPress/WooCommerce triage, Shopify checkout QA

Delivery style: reproducible artifact, acceptance check, review notes, handoff, risk notes and next steps

REPRESENTATIVE WORK FORMAT

Automation / data cleanup: inspect sample input, define cleanup rules, produce clean output and rejects, include counts and review notes.

Web / WordPress fix: reproduce the broken state, patch the focused slice, check responsive behavior and leave a clear handoff.

Internal tool / MVP: define the smallest useful workflow, ship a reviewable first pass and separate future product work from the current scope.

Mobile MVP: map roles, navigation, API/server state, local persistence, loading/error/empty states and iOS/Android acceptance checks before product scope grows.

Dashboard / frontend fix: reproduce issue, isolate DOM/CSS/JS cause, patch focused slice, check desktop/mobile and report remaining risks.

API / workflow reliability: turn unclear symptoms into checks, capture status/timing/error evidence, document what failed and what changed.

AI workflow wiring: separate demo from production, wire approved inputs/model calls, add fallback paths, log outputs and require dry-run validation before real use.

Website lead recovery: review one lead path, capture mobile/form/booking/menu issues, fix one focused slice when possible and leave handoff.

Agent Ops: audit task instructions, context layout and check gates, then return a cleaner workflow that is easier to reproduce.

LANGUAGES

Portuguese: native. English: fluent professional working proficiency. Spanish: working proficiency for technical communication. French, German and Italian: assisted professional drafting/review for technical outreach and marketplace profiles.

AVAILABILITY

Available for remote freelance work, scoped technical fixes, mobile MVP first-sprint architecture, 24-48h first passes, QA/reliability checks, automation cleanup and public-proof-backed workflow support.
